

Trench Drain Filter Frame System with Trench Drain Filter

- Stops illicit debris, petroleum by product, oil and gas runoff from hitting the street.
- Effective during high flow periods and terrenal rain; not just during low flow.
- No oil sludge build up on geo cloth that needs constant cleaning.
- No over engineered extra components that back up water drainage; no PVC pipes; no unnecessary geo fabric; no extra blockage that prevents water flow.
- System contains debris before outlet to stop heavy debris and allows for more filter media that stops hydrocarbon from entering stormwater drain systems. 10 times more efficient at hydrocarbon prevention than other systems
- Extremely easy to maintain, low in cost and provides adequate drainage & by pass. Sizes available for common and not so common trench drain sizes.
- 100% Media Fill tubular filter socks for trench drains
- No expensive replacement parts
- Water flows over hydrocarbon filter 100% of time; not part of the time.
- System fits Zurn, ACO, NDS systems
- Approved: Equal to OR better than alternative to more expensive alternatives.

Recommended Filter Replacement every 6 months as necessary.
